INTERNSHIP

DOT NET DEVELOPER

Webnet Technologies Patna
Project:-http://magadhcancercentre.com

1. Admin Login:
- Typically, an admin login system involves user authentication and authorization. Admins should have unique credentials (username and password) to access the admin panel.

1. **Slider Change:**
- In a website context, a slider often refers to a dynamic image or content carousel on the homepage. Admins should be able to change the images or content displayed on the slider. This might involve an admin interface where they can upload, reorder, or modify slider items.

2. **Admin View Data:**
- Admins usually need access to specific data stored on the website or web application. This could include user data, content, or any other relevant information. An admin dashboard is commonly used to provide this access.

3. **Update and Delete Data:**
- Admins should have the capability to update and delete records in the system. For example, they might need to edit user profiles, delete inappropriate content, or manage other resources within the website.

DECLARATION

I hereby declare that all the above information furnished by me is true to the best of my knowledge.
